Profile

Frontend Engineer with 3.5+ years of experience building scalable, high-performance web applications using **React.js** and **Next.js**. Strong expertise in developing responsive, user-focused interfaces, handling complex UI logic, and integrating APIs in production environments.

Worked on enterprise and defense-grade applications, delivering real-time features, **role-based access control (RBAC)**, and data-intensive UI systems. Experienced in collaborating with cross-functional teams to ship reliable, production-ready features under tight timelines. Familiar with backend development using **Node.js** and **Express** for API integration and end-to-end system understanding.

Skills

- Programming Languages: **JavaScript (ES6+), TypeScript**
- Frontend: **React.js, Next.js, Tailwind CSS, Material UI, Shadcn**
- Backend: **Node.js, Express.js**
- State & Data: **Redux Toolkit, Zustand, REST APIs**
- Systems & Features: **RBAC, Real-time (Socket.io), JWT Authentication**
- Databases: **PostgreSQL, MongoDB, GraphQL**
- Cloud: **AWS, GCP**
- Tools: **Git, GitHub, Postman, Figma, Jest**
- AI Tools: **ChatGPT, GitHub Copilot, Cursor**

Experience

TECHNICAL SPECIALIST | WARPDRIVE TECH WORKS (SCOTTY - B2B SAAS PRODUCT) | OCTOBER 2025 – JANUARY 2026 | BENGALURU

- Developed multiple **responsive UI modules** using **Next.js** and **Tailwind CSS**, translating complex **Figma designs** into **production-ready interfaces** across multiple user flows, ensuring consistency in layout, state handling, and user interactions.
- Built UI for a **real-time chat system**, handling multiple interaction flows and states (**message updates, typing indicators, channel switching**), ensuring a smooth and consistent user experience at scale (**frontend scope**).
- Implemented **role-based access control (RBAC)** across the application by enforcing **route guards** and **permission-based UI rendering**, securing routes and UI access, and eliminating unauthorized deep-link navigation issues.
- Developed a **face recognition login flow** using **FaceAPI.js**, including onboarding, biometric setup, and account management interfaces, ensuring a seamless and secure authentication experience.
- Built **geofencing and geotagging UI systems** using **Google Maps APIs**, enabling real-time field tracking and validation workflows with accurate location-based interactions.
- Optimized UI for **responsiveness** and **PWA support**, ensuring consistent performance, faster load times, and reliable behavior across devices and network conditions.

ASSISTANT SYSTEM ENGINEER | TATA CONSULTANCY SERVICES (TCS) | JULY 2022 – SEPTEMBER 2025 | BENGALURU

- Developed **responsive frontend modules** using **React.js** for a **defense application (DRDO)**, building **data-intensive tables** and workflows with seamless **API integration** and reliable data handling.
- Built a **product discovery module** with **infinite scroll** and **advanced filtering**, replacing the legacy search system and improving usability and data navigation.
- Developed a **cart and tracking module**, integrating backend APIs to support **real-time inventory updates** and budget-based workflows.
- Implemented **role-based authentication flows (login/signup)** from **Figma to production**, handling validation, state management, and **secure access control**.
- Built a **real-time chat feature** using **React, Node.js, and Socket.io**, supporting **one-to-one and group communication** with consistent message synchronization.
- Contributed to a **microservice-based application** serving **large-scale users**, implementing **secure authentication** using **Node.js, Express, JWT**, and robust error handling.
- Gained hands-on experience with **GCP** (Cloud SQL, Firebase Auth, Google Maps APIs) and **AWS** (EC2, S3, DynamoDB), supporting backend integration and implementing location-based features.
- Led a **team of 5** to build a **VR-based Biology Lab for Oculus**, coordinating across design and development to deliver a functional and interactive learning experience.

Personal Projects

Real-time Video Calling App (Zoom-like)

- Built a real-time video calling application using Next.js with authentication and core meeting features.
- Implemented responsive UI and integrated video communication libraries to enable smooth one-to-one sessions.
- [GitHub Link](#)

Marketplace Platform (OLX-like)

- Developed a full-stack marketplace platform for product listings and transactions with secure user authentication.
- Designed backend APIs and managed database workflows for efficient handling of user and product data.
- [GitHub Link](#)

Sora: AI- Powered Reels mobile application

- Built an AI-powered reels application displaying generated images with prompts using React Native and Expo.
- Implemented dynamic UI and integrated backend services for content management.
- [GitHub Link](#)

Hackathon

Full Stack Web App Development

Solo Hacker, Angel Hack Bangalore, May 2024

- Built a full-stack job platform for freelancers in a 48-hour hackathon with secure authentication, smart job suggestions, and advanced filtering.
- Designed and delivered an end-to-end working product under tight timelines, focusing on usability and core functionality.

Education

Bachelor of Computer Application (BCA)

Chinmaya College of Arts, Commerce & Science, Mahatma Gandhi University

June 2019 – June 2022 | Kochi, Kerala

Certifications
